

MPDU

MANAGEMENT & CONTROL

CUSTOMIZABLE PDU

The MPDU (Managed Power Distribution Unit) is a customizable PDU that includes programmable phased start-up and load shedding through a smart monitoring Programmable Logic Controller (PLC). The Managed Power Distribution Unit can include a variety of single or three-phase managed outputs which can be manually or programmatically powered on or off according to predetermined rules.

Why you can put your trust in the MPDU:

Highest Quality Power – Sine wave matches UPS output

Most Reliable – Highest MTBF

Customizable – Made to fit your equipment needs

Fully Integrated – Plug-and-play modular design, no assembly required

EPO, Fire, & Smoke Detection – Environmental monitoring circuits with alarms and triggers for protecting monitored systems

CUSTOMIZATION OPTIONS

- Single-phase receptacles/breakers
- Three-phase receptacles
- PLC/PC capabilities (optional)
- Transformer (optional)
