

LITEON GROUP

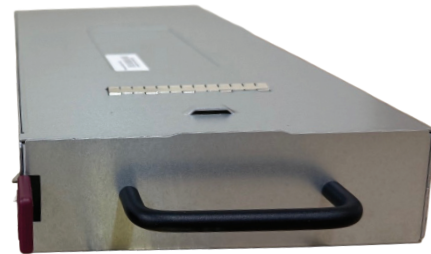

Description

Power Innovations International's (Pii) KE-0010-P1XU is a family of empty/blank modules that is used to take the place of a rectifier, inverter, or DC/DC converter where a power module slot is available, but the application does not require the placement of that power module. This module is designed to physically fill up any empty slots in a power pack, ensuring that airflow is properly routed to other, in-use Pii power modules.
